

# Beat the Heat Water Mistors at Arizona State

Arizona is know for it's blistering heat during the summer. To combat the heat, we want to implement water misters on Arizona State's campuses.

Heat related deaths are continuing to rise in Arizona

## Our Plan

We know that walking to and from class can be very hard because of the heat. We want to incorporate these misters on the side of buildings and major walkways throughout Tempe's campus.

Testing if If students and staff really enjoy this, we would like to expand to other campuses.

Many outdoor restaurants and shops all over Arizona already implement water misters as a standard. This opportunity would be great for students, staff, and visitors on campus.
