Our Mission!

Our mission is to create a safer and cleaner environment at Arizona State University.

88% of students at Arizona State University feel as if they have a constant overflow of trash in their dorm building compromising their health and safety.

Approximately 12.6 million deaths occur a year that are traced back to bad waste disposal practices. These effects can be anywhere from: skin irritation, blood infections, respiratory and reproductive issues.

87.5% of students deal with trash overflow compared to the 12.5% that said they do not.

Students who have had respiratory issue since living at ASU.

45.2% of the student population are unaware of the health effects of improper waste disposal.

Since first semester I have had to deal with the trash overflow in the hassy dorms that make my entire floor smell like expired waste. - Tyler M.
